

Specialist Cleaning Division Confined Space Cleaning

What is Confined Space Cleaning?

According to the HSE, a confined space can be any enclosed space where there is a risk of death or serious injury from hazardous substances or dangerous conditions, such as lack of oxygen. Some are easy to identify, such as storage tanks, silos, reaction vessels, enclosed drains and sewers, with limited access. But others that are less obvious can be equally dangerous, such as open topped chambers, vats, combustion chambers, inside machines or ovens, ductwork or poorly or unventilated rooms. Some spaces may become confined when work is carried out in construction, fabrication or modification.

The risks of Confined Space Cleaning?

The cleaning of inaccessible and hard to reach confined spaces is a challenge. Every year in the UK, people are killed or seriously injured in confined spaces. These are often people working in the space or those who try to rescue them without the proper training or equipment. And confined spaces exist in a wide range of industries, from complex plants to simple storage vessels.

Once thorough risk assessments have taken place, cleaning or entry into a confined space requires that any entrant and 'top man' must be confined space trained. The top man remains outside of the risk area and is available to summon help if necessary and activate a rescue if required and safe to do so.

Why choose Confined Space Cleaning?

Confined space cleaning is clearly a high-risk activity and, where possible, confined space work is avoided and alternatives are explored. However, this isn't always possible and often it is the most cost effective solution for achieving a higher quality standard of clean.

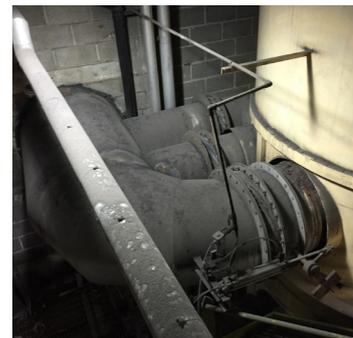

Where can AM Services Group Specialist Technicians deliver real benefits with Confined Space Cleaning?

All of our Specialist Cleaning Technicians are confined space trained and have substantial experience in a range of different confined spaces. They have experience of providing the service to a wide variety of customers, including Blue Chip companies. We carry out confined space work in the automotive, aerospace, manufacturing and food industries.

Why choose AM Services Group Specialist Technicians?

- experienced and highly trained to deliver the service
- use latest technology to provide the very best outcomes
- have an exemplary safety record and all of the accreditations you would expect
- offer a nationwide 24/7 service to meet the requirements of the client
- use ATEX rated tools or HEPA systems to reduce the risk of fire and explosion
